LAPORAN TUGAS MINGGU 10

Disusun sebagai

MATA KULIAH: FRAMEWORK (PBF)

Oleh:

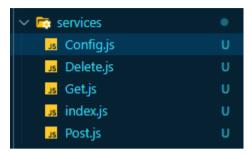

Geraldo Bintang I / 1741720154 TI – 3B / 15

PROGRAM STUDI: D-IV TEKNIK INFORMATIKA JURUSAN: TEKNOLOGI INFORMASI POLITEKNIK NEGERI MALANG 2020

TUGAS

1. Buat folder services di dalam folder src, kemudian buat file Config,Delete,Get,index,Post. Seperti berikut :

2. Isi file Config.js

```
src > services > services > services > config.js > ...

1  export const domainPath = "http://localhost:3001";
2
```

3. Isi file Delete.js

```
Js Delete.js X
               S Config.js
                               us index.js
                                                                        ţį
src > services > Js Delete.js > ...
       import { domainPath } from "./Config";
       const DeleteAPI = (path, data) ⇒ {
         const promise = new Promise((resolve, reject) ⇒ {
            fetch(`${domainPath}/${path}/${data}`, {
              method: "DELETE",
              headers: {
                Accept: "application/json",
                "Content-Type": "application/json",
            }).then(
              (result) \Rightarrow \{
                resolve(result);
              (err) ⇒ {
                reject(err);
         3);
         return promise;
       };
       export default DeleteAPI;
```

4. Isi file Get.js

```
Js Get.js
                Js Delete.js
                                                 Js index.js
                                 Js Config.js
src > services > Js Get.is > ...
        import { domainPath } from "./Config";
        const GetAPI = (path) ⇒ {
          const promise = new Promise((resolve, reject) ⇒ {
            fetch(`${domainPath}/${path}`)
               .then((response) ⇒ response.json())
                 (result) \Rightarrow \{
                  resolve(result);
                 ξ,
                 (err) \Rightarrow \{
                   reject(err);
               );
          3);
          return promise;
        export default GetAPI;
```

5. Isi file index.js

```
us index.js ...\services X us Get.js
                                   Js Delete.js
                                                   Js Config.js
                                                                  」s ເຖິ Ⅲ ···
src > services > 📠 index.js > ...
       import GetAPI from "./Get";
       import PostAPI from "./Post";
       import DeleteAPI from "./Delete";
       const getNewsBlog = () ⇒ GetAPI("posts?_sort=id&
       _order=desc");
       const postNewsBlog = (dataYgDiKirim) ⇒ PostAPI("posts",
       dataYgDiKirim);
       const deleteNewsBlog = (dataYgDiHapus) ⇒ DeleteAPI
       ("posts", dataYgDiHapus);
       const API = {
        getNewsBlog,
         postNewsBlog,
        deleteNewsBlog,
```

6. Isi file Post.js

```
index.js ...\services
                                                                       Js ÇŢ
Js Post.js
                                      Js Get.js
                                                      Js Delete.js
src > services > Js Post.js > ...
        import { domainPath } from "./Config";
        const PostAPI = (path, data) ⇒ {
          const promise = new Promise((resolve, reject) \Rightarrow {
            fetch(`${domainPath}/${path}`, {
              method: "post",
              headers: {
                 Accept: "application/json",
                 "Content-Type": "application/json",
              3,
              body: JSON.stringify(data),
            }).then(
              (result) \Rightarrow \{
                 resolve(result);
              3,
              (err) \Rightarrow \{
                 reject(err);
              3
            );
          3);
         return promise;
        };
        export default PostAPI;
```

7. Isi file Blogpost.jsx

```
₱ BlogPost.jsx × Js Post.js

                                   s index.js ...\services

```

9. Hasil

Penambahan Mahasiswa:

Hapus Mahasiswa

Status pada json-server

Post = Untuk Penambahan Mahasiswa

Delete = Untuk Penghapusan Mahasiswa

```
POST /posts 201 9.523 ms - 169

GET /posts?_sort=id&_order=desc 200 4.274 ms - 191

DELETE /posts/1586342419022 200 5.972 ms - 2

GET /posts?_sort=id&_order=desc 200 4.240 ms - 2
```

PERTANYAAN

Praktikum 1

a. Fungsi GetAPI: Untuk menjalakan method promise yang dimana domainPath dapat di *resolve* (di *fetch*) atau di di *reject*

Fungsi getNewsBlog: Untuk mendeklarasi bagaimana artikel akan di fetch

Praktikum 2

- 1. Untuk menambah data yang akan di tambahkan pada file .json
- 2. Adalah value yang akan di jadikan acuan yaitu insertArtikel

Praktikum 3

- 1. Untuk menghapus data yang ada pada file .json
- 2. Adalah value yang akan di jadikan acuan yaitu insertArtikel

Praktikum 4

1. Membuat file baru kemudian mengimport-nya pada index.js
